# Una vita da libellula

AIUTO!

PRESO!

# La vita della libellula

1. Le libellule si accoppiano; 2. La femmina depone le uova in acqua; 3. La larva, nata dall'uovo, caccia sott'acqua le sue prede; 4. La larva esce dall'acqua arrampicandosi sullo stelo di una pianta; 5. Il "guscio" della larva si spacca e ne esce pian piano la libellula; 6. La libellula appena nata asciuga le ali al sole: appena pronta volerà via.

# Riconoscere gli insetti

Odonati  
(libellule)

# Riconoscere gli insetti

ortotteri  
(cavallette)

ditteri  
(mosche)
